

Wireless Access at the University of Toronto 44th College Chemistry Canada Conference

The University of Toronto campus has an extensive WiFi network in all major buildings, including the Chemistry Department. Guest access to the campus wireless network requires either **eduroam** credentials or a limited term **guest id and password**. Details, along with a full map of wireless hotspots is available from this page:

<http://wireless.utoronto.ca/>

Please note that residences generally have their own internet access arrangements; if you are staying in Victoria College or another residence, please check with them for access credentials.

Eduroam:

You can find out if your home institution is a member of the eduroam consortium here:

<https://www.canarie.ca/identity/eduroam/>

If your institution is a member, please contact your local IT office to ensure your credentials are activated *before* leaving for Toronto.

Guest Credentials:

If your institution is not a member of eduroam, you will need to be issued with guest credentials. **Please contact David Stone (dstone@chem.utoronto.ca) before the conference if this is the case**, and we will provide you with credentials during conference registration.

Connecting to the Network:

You will need to select either the **eduroam** or **UofT** network from the list of available locations. Both networks support sign-in using WPA2 with AES encryption using 802.1x authentication. Full setup documentation can be found here:
